OUR EXCLUSIVE PRECISION A/C TUNE-UP PROCEDURE INCLUDES:

- Thoroughly clean & replace standard air filter(s)
- Inspect evaporator coil and drain pan when readily accessible
- Clean and inspect condensate drain and fittings
- Inspect, tighten, and test all electrical connections. This includes disconnect switch, cooling system electrical wires, connectors and terminals
- Test system starting and running capacitors
- Test all controls, switches, relays, transformers, contactors, motors, and fans
- Measure starting and running amperes, lines voltage and control voltage
- Test system for proper airflow and air delivery
- Inspect and adjust all safety controls
- Monitor refrigerant (Freon) pressures and temperatures
- Monitor fan motors and compressor operating temperatures
- Advise customer on other ways to reduce energy consumption, improve safety, and enhance comfort.

OUR EXCLUSIVE PRECISION HEAT TUNE-UP PROCEDURE INCLUDES:

- Inspect and tighten all electrical connections and terminals
- Remove, clean, and adjust main gas burners
- Inspect heat exchanger(s) & combustion chambers for cracks, rusting, or problem areas
- Inspect the flue assembly and test flue gas drafting mechanism
- Test and inspect all furnace safety controls, and perform a complete electronic carbon monoxide test
- Test, record, and adjust gas pressure
- Replace or clean standard air filters
- Measure & adjust blower for correct airflow
- Adjust dampers and set proper blower speed(s)
- Inspect and test thermocouple output as well as pilot safety switch
- Measure and record electrical voltage, amperage, and component resistance
- Inspect and test all system transformers, relays, contactors, controls, and measure performance
- Advise customer on other ways to reduce energy consumption, improve safety, and enhance comfort.
